Look at the two shapes separated by an arrow or the words **are to** on the left. The first shape relates to the second one in some way. To the right of these shapes, there is a third shape followed by four or five other shapes. One of these given shapes is related to the third shape in the same way as the two shapes on the left are related to each other. Choose which one.

Important 2011 Mock Exam Dates		
Birmingham	18 September 2011 (Sold Out) 9 October 2011 (Sold Out) 15 October 2011 23 October 2011	£45
London	25 September 2011 9 October 2011 24 October 2011 (HALF TERM)	From £15
West Yorkshire	25 September 2011	From £30

It is worth remembering that in some areas only one in ten applications are successful. So for thousands of children, securing a sought-after grammar school place rests on that all-important entrance exam.

We will be offering children the experience of simulated Grammar School exam conditions. With our own children we discovered that often children can become very uncomfortable with the prospect of sitting an examination in a room filled with strangers and this can frequently result in some distress or worry. By sitting a number of Mock Exams children are able to become familiar with the examination setting, therefore worry and distress are reduced.

With 11PLUSDIY your child will be tested against other children and you will be able to accurately judge how well their preparation is going compared with the other children intending to sit the 11 Plus exam. It has been proven that Mock Exams can provide an extremely accurate indication of the final exam positioning and multiple Mock Exams over time will allow a parent to track their child's progress.

With 11PLUSDIY, parents will receive a results report providing you with your child's score, percentage and placement out of the Mock Exam group for every test. Additionally parents will also receive additional notes detailing suggestions to aid your child in the forthcoming exams

Answers and Explanations		
1	B	Inversed background on snowflake.
2	C	Related fill patterns between left and right side of each shape.
3	D	The starting shape has 4 sides. The matching shape should also have the same number of sides. The new shape pair realign diagonally. Either the top, bottom or both parts of the new overlapping shape pair is shaded.
4	C	Flip shapes along the X axis. Fill style toggles between black and white.
5	A	The partial shading of the cells moves from Top-left to Bottom-right. The location stays the same.
6	A	The main shape is has the same random set of points but connected in a different order.
7	D	Each option image has 4 arrows which intersect in the centre. Look at the starting and ending head style of each arrow. 4 arrows should be the same.
8	D	The odd one out polygon is NOT symmetric about its centre line.
9	C	The difference between the shape count on either sides should be the same.
10	D	There are three shapes in the cluster at the top. The middle one of these shapes should have a solid black fill pattern. All other shapes are irrelevant.
11	B	The odd one out is a different maze pattern. All others are same pattern rotated.
12	E	Each shape has two sides of a rectangle. Which two sides of the rectangle are drawn is decided by the first alphabet. The second alphabet decided the location of the black roundel. There are 4 possible positions. The roundel can be placed along the vertical
13	A	The left alphabet decides the orientation of the line. The second alphabet decides the external arrowhead outside the central circle. The inside arrow head is not relevant.
14	E	The number of vertical and horizontal lines. The second alphabet decides hatch style of the polygon at the bottom.
15	D	The first alphabet decides the line style of the axis in the centre. The second alphabet decides types of three shapes in the quadrants. The locations of the shapes are not relevant.
16	A	The side of the outer polygon decrease in each step. The fill pattern of the inner polygon alternates between hatch and white.
17	A	The circle shrinks in size or grows in every step and also rotates.

18	B	Imagine a rectangle with eight points along its perimeter which divides each of its side in 2 parts. The line segment composed of 3 segments travels clockwise along the perimeter. The black roundel travels clockwise along the perimeter.
19	A	The number of small stars starts at 11 and decreases by 1 in each step. The number of polygon sides starts at 5 and increases by 1 in each step. In every alternate step the larger star is filled light grey.
20	B	Cube rotation
